**Compatibility study on the impact of LTE/ Wimax on the radars in the 2700-
2900 MHz band**

The company Intersoft Electronics NV conducted a study, commissioned by BIPT. The services of Belgocontrol and the army were closely involved in the execution of the measurements.

Based on this study, BIPT will publish a decision with clear and explicit conditions, which must be imposed to guarantee the coexistence between those radars and the LTE/Wimax-networks. BIPT attaches a great deal of importance to the practical feasibility of these conditions, both in technical and financial terms.

The indicative timetable for the approval process of this decision is the following:

Consultation of the draft decision	1 July 2011
Answers to the consultation	5 August 2011
Publication final decision	9 September
Submission of the applications for the 4G auction	14 October 2011
